

PARTNER
software

For organizations using the Partner Complete platform, Partner Next now supports:

Damage Assessment

- Create & edit records
- Attach photos from device camera or photo roll
- View photo attachments
- Get assignments
- Sync records when connected to a network
- Work disconnected when without a network

Right of Way Vegetation Management

- Create & edit records - individually or on a Trace
- Create Area records by drawing
- Attach photos from device camera or photo roll
- View photo attachments
- Get assignments
- Sync records when connected to a network
- Work disconnected when without a network
- Selecting a Group highlights all records in the Group on the map
- Selecting a Group accesses Group summary

Live Publish

- Synchronize and display Live Publish KML data imported on desktop
- Select and view associated data on Live Publish items

Other Improvements new to this version include:

Distribution Inspection

- Attach photos from device camera or photo roll
- View photo attachments
- Create and re-inspect records not associated with a mapped item

- Ride Out records created in the desktop application are visible and accessible in Partner Next
- Removed the ability to Delete or Archive a synchronized record

Map Viewing Platform

- Added context sensitive Wheel menu to map selection
- Moved context based actions to Wheel menu
- Copy Data action now available for configured Live records
- Added the Tool selection button in support of Live products
- Added the Tracing action, *Find Protective Device*
- Improved per Edition licensing for Live modules
- Improved Location Services to prevent app crashing
- Improved messaging when hiding a Live mapset
- When included in a map selection, Live types are preceded by their product name abbreviation (e.g., DI, ROW, DA)

Known Bugs

- On iPhone, iOS 10 causes the following issues with PN v3.4:
 - The Quick bar buttons stack on top of each other on start up. They correct when the device is rotated.
 - The Tools button disappears after selecting a tool. It is no longer visible or selectable. Shutting down/restarting the app restores it.
